OBJECTIVE

Third-year Software Engineering student at Sai Gon University with a strong foundation in Java, JavaScript, and DevOps. Aiming to grow as a Full-Stack Engineer with a long-term goal of building scalable, high-performance distributed systems. Passionate about system design, backend architecture, and performance optimization.

EDUCATION

Sai Gon University	Expected 2028
Bachelor of Software Engineering	Ho Chi Minh City, Vietnam
- GPA: 3.2/4.0 - Relevant Coursework: Advanced Web Development, Data Structures and Algorithms, Object-Oriented Programming (Java), Software Testing & QA, Database Management.	

SKILLS

Programming Languages: Java, JavaScript, TypeScript

Frameworks: Spring Boot, React, Node.js, Next.js

Cloud & Databases: AWS, MongoDB, PostgreSQL, Redis, Supabase, Cloudflare

Tools: Docker, Git, Postman, GitHub CI/CD, Kafka

Languages: Vietnamese (Native), English (Working)

PROJECTS

Animeflix – Anime Streaming Platform [GitHub]	Jun 2025 – Present
<i>Next.js 15 (App Router), React 19, TypeScript, MongoDB, Redis, NextAuth, Vdstack, Vercel</i>	

- Built a full-stack anime streaming platform integrating AniList API and multiple streaming providers with fallback handling.
- Designed scalable App Router architecture (Server/Client Components) to optimize SEO and performance.
- Implemented Redis caching and custom API aggregation to reduce rate limits and improve response time.
- Developed HLS video streaming with Vdstack and persistent watch history using MongoDB.
- Deployed on Vercel using serverless functions for automatic optimization 🌐 **ANIMEFLIX**

Animeflix Third-Party System [GitHub]	Oct 2025 – Present
<i>Spring Boot, Docker, MongoDB, Kafka, Redis (Upstash), RAG, AWS</i>	

- Architected a scalable microservices backend serving as API gateway and third-party anime data aggregator.
- Designed and implemented core services: Auth (JWT + rate limiting), User (watch history, recommendations), Catalog (anime metadata, search, seasonal/top lists), Episode Orchestration (multi-provider streaming fallback)
- Implemented event-driven communication with Kafka and Redis caching to improve scalability and throughput.
- Developed a Hybrid AI Search module using RAG, vector embeddings, and LLM query parsing for fuzzy anime search.
- Deployed Dockerized services on AWS cloud infrastructure.

ACTIVITIES & INTERESTS

- Passionate about system design and user-centric web application architecture.
- Enjoy participating in team sports and continuously improving English communication.
